

CybdocLock

A 14x14 ESP-32 powered word clock!

By Ryan (@cybdo), an Australian 16 y/o

Word Clock

that doesn't cost an arm and a leg!

Easily mountable

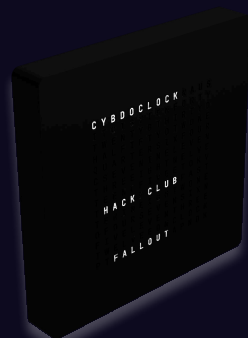

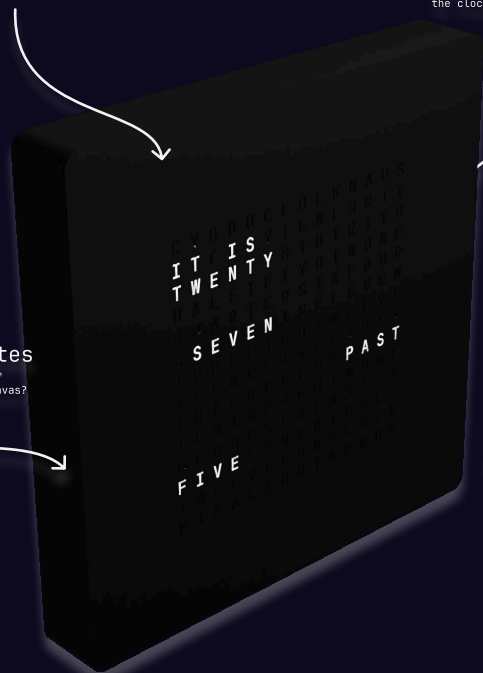

supports command strips on the back as well as a desktop stand! (trust me, the arrow points behind the clock)

Swappable faceplates

magnetically attached, coming soon™
is it a clock? a calendar? or a canvas?

ESP32-C6

native wifi, bluetooth and matter over thread support!
